Minnesota has become the 22nd state to legalize medical marijuana use. Under the restrictions listed in the bill, the drug will be available in pill, oil and vapor form only and cannot be smoked legally or accessed in leaf form. Eligible medical conditions for receiving medical marijuana include cancer, glaucoma and AIDS. Patients will also need certification from a physician or advanced practice registered nurse.

State legislators believe that these restrictions satisfied concerns of law enforcement and medical groups, without whose support Governor Dayton would not sign the legislation. However, even with Minnesota having one of the nation’s most restrictive legalization policies containing tight controls over qualifying conditions and administration, some remain concerned with the adverse effects the new legislation may still have on the Minnesota’s driving public.

Marijuana is known to affect reaction time, short-term memory, hand/eye coordination, concentration and perceptions of time and distance – all important factors when operating a motor vehicle.

Early data collected on drugged driving have produced mixed results. According to data from the Colorado State Patrol, 374 out of the 2,314 DUIs statewide already this year (12 percent) have been due to marijuana. Since 2004, California statistics have shown a “marked increase in driver fatalities testing positive for marijuana,” according to Dr. Gouhua Li, director of the Center for Injury Epidemiology and Prevention at Columbia University Medical Center. Dr. Li further predicts that non-alcohol drugs, such as marijuana, will surpass alcohol in traffic fatalities around 2020.

Yet, in other states where marijuana has been legalized,
Minnesotans Click It or Ticket

Seat belt enforcement wave encouraged motorists to buckle up

It's just not worth it, take the time to buckle up."

Minnesota State Patrol also honored two "Saved by the Belt" recipients given to lifelong best friends who were involved in a crash during a blizzard in Carlton County.

The campaign ran through June 1 and nearly 400 agencies across Minnesota increased patrols to encourage motorists to use their seat belts.

"There are people not walking this earth today because last year they didn't get the message," said Scott McConkey, southern Minnesota law enforcement liaison.

"Even though most Minnesotans buckle up (nearly 95 percent), 587 people died and 9,739 were injured in the last five years on Minnesota roads as a result of not being belted," says Donna Berger, DPS Office of Traffic Safety director/TZD co-chair.

"When they stop and write someone a seat belt ticket, it's one of the most compassionate things they can do," he said.

To promote the child passenger safety aspect of the enforcement wave, TZD south central region invited Tracy Brown, southern Minnesota child safety passenger liaison, to attend the Eagle Lake Safety Fair and provide the community with information about child passenger safety including the 5-step seat belt test to determine if a child is ready to ride in a seat belt or if a booster seat is still needed.

The enforcement wave resulted in 10,874 seat belt citations, according to the Minnesota Department of Public Safety Office of
Traffic Safety (DPS/OTS) with results reported by 329 agencies and included 279 child seat citations. “The Click It or Ticket” enforcement and education campaign reminds motorists that buckling up not only is the law, it’s your best defense in case of a crash,” said Berger. “The key to stopping these preventable deaths begins with every motorist buckling up.”

Minnesota’s seat belt law is a primary offense, meaning drivers and passengers in all seating positions must be buckled up or in the correct child restraint.

I Can’t Drive 55?
Legislature approves higher speeds on Minnesota roadways

As part of their 2014 budget bill, Minnesota lawmakers have passed a bill requiring MnDOT to study 2-lane state highways to determine if speed limits can be “reasonably & safely” increased from 55 mph to 60 mph. By 2019, state engineers must examine 6,771 miles of Minnesota roads with a current speed of 55 mph and see if the limit can be increased.

Traffic engineers will analyze crash history, road design, lane width, sight lines and ditch slope to see if the road is a candidate for a higher speed limit. "It's quite a bit of work," says Sue Groth, MnDOT state traffic engineer/TZD Co-chair. "We actually do have to pull crash data, go out and drive the roads, take a look at the geometry and the lane width."

Groth points out that just because a road is studied, does not mean that it will automatically receive an increased speed limit. Prime candidates are roadways with straight, wide-open stretches and clear sight lines.

"Speed limits will be identified that we believe are safe and reasonable; therefore, within their confines,” said Peter Buchen, MnDOT assistant state engineer. “As long as drivers comply with posted speed limits, it shouldn’t have any impact on Minnesotans, but if they choose to exceed the speed limit as they do today, the consequences can be very dire.”

Engineers also say that there is a benefit to fostering more consistent speeds. Newer roads often contain built-in safety features such as broader shoulders and extra room for recovery.

It can take up to one year from the time the study begins to having a new speed limit sign installed alongside the road. The cost to cover those miles requiring study is approximately $700,000. This price tag has some people asking is it worth it? "Well it’s worth it if lives are involved. We want to make sure we make good decisions," says Groth.
Drugged Driving

Continued from pg. 1

overall traffic fatalities decreased as much as 11 percent in the first year after legalization. One theory for this deduction is that once legal, marijuana became a substitute for alcohol and caused a 13 percent reduction in drunk driving fatalities.

When asked his opinion on the new medical marijuana laws, State Patrol Lt. Don Marose stressed, “Drivers need to remember that, while there is no per se level for marijuana when it comes to DWI, any impairment detected by law enforcement could result in an arrest.”

“Marijuana presents in very specific signs,” continues Marose and “is detectable in both blood and urine.”

All law enforcement officers in Minnesota are trained in the recognition and detection of drug impaired drivers. Further, there are 200 drug recognition evaluators from 92 agencies throughout the State who have received specialized training in drug impaired driving.

It still may take years to know marijuana’s effect on the number of fatal crashes in Minnesota and nationwide. Even Colorado State Trooper Nate Reid is hesitant to claim the rising DUI percentages as an increase without data from years past to use as a comparison. Trooper Reid states in an article from The Daily Beast, an online news source, “It’s too soon.”

component is in addition to the current 30 hours of driver education classroom time and six hours of behind the wheel training required for drivers under 18.

While not required to use the Department of Public Safety’s parental curriculum, Point of Impact, the amended legislation does mirror its structure. Gordy Pehrson, Teen & TZD Safe Roads Coordinator, DPS/OTS, stated that this legislation, “provides driver educators the opportunity to reach the parents of every soon-to-be teen driver and gives them the information they need to help their children become safer drivers.”

Thanks to efforts by State Representative Kim Norton and State Senator Susan Kent, a parental curriculum component for driver education is now a law in Minnesota, effective January 1, 2015. This parental

they need to help their children become safer drivers.”

Under the new legislation, the parent component must contain the following requirements:

• Be at least 90 minutes in length;
• Be provided by or in presence of a driving instructor; and
• Provide information on graduated driver licensing laws, safety risks for new drivers, influence of adults on driving behaviors for novice drivers and additional driving resources.

Requirements for a receiving a provisional license have also been amended. Applicants must now submit a supervised driving log that states that the applicant has driven a motor vehicle.

Story continued on pg. 5
Parental Component for Driver Education Now Mandatory

Teen and novice drivers remain at high risk for crashes in Minnesota and statistics indicate that the number of crashes involving new drivers skyrocket during the first year after obtaining full licensure. Why? No experienced drivers in the car supervising and helping the new driver gain valuable experience. While the Graduated Driver License program has helped mitigate this issue, more work is needed. With this new legislation, driver education instructors are now required to include a parental component to their curriculum, which will help parents understand the current GDL laws, how they can enforce these laws at home and how they can best keep their teens safe while they gain driving experience. (See Point of Crash data. In addition, two-lane rural highways continue to be the primary roadways for serious injury crashes. The legislature has approved a bill requiring MnDOT to study two-lane state highways to determine if speed limits can be “reasonably and safely” increased from 55 mph to 60 mph. By 2019, MnDOT must study Minnesota roadways to determine which ones are able to safely meet this new speed limit legislation. MnDOT traffic engineers will be considering many factors when determining if a roadway’s speed limit can be safety increased. Some factors include shoulder width, clear zone, current speeds, pedestrians and bicycle activity as well as crash history. (See I Can’t Drive 55, pg 3)

Medical Marijuana

Minnesota is now the 22nd state to approve marijuana use for medical purposes. Even with many heavy duty restrictions on usage and distribution, Minnesota is poised to enter into what could be the “next big issue” in traffic safety. DPS will continue its effort to educate the public on the dangers of driving under the influence and promote the message of designating a sober driver. (See Drugged Driving, pg 1)

While the new legislation does raise some concerns for TZD and traffic safety partners, the 2014 session is considered largely successful.

Point of Impact

Continued from pg. 4

accompanied by and under the supervision of a licensed driver at least 21 years of age, for no less than 40 total hours, at least 15 of which were nighttime hours. In addition, it identifies dates and lengths of driving time for each supervised driving trip and is signed by the primary driving supervisor. Previously, only 30 hours of driving time was required with 10 of those hours being at night.

While these are the new minimum requirements, Pehrson stresses that, “parents need to spend many, many more hours practicing with their teens in varied driving conditions including bad weather to develop their driving skills and reduce crashes.”

If parents are unable to complete the parent awareness class, the teen driver must log a minimum of 50 supervised behind the wheel hours, with 15 being at night.

For more information on amendments to the graduated driver licensing governing requirements, see Minnesota Statutes, Section 171.05 (Instruction Permit) and Minnesota Statutes, Section 171.055, Subdivision 1 (Provisional License).

Toward Zero Deaths Statewide Conference

November 13-14, 2014 Duluth, MN
TZD Regional Workshops Bring Traffic Safety Partners Together

TZD partners across the state recently conducted their annual regional workshops to help support and facilitate the TZD activities in their local communities. Seven regions held workshops this past spring. Each workshop included the latest crash data for the region, contained a personal impact speaker, and afternoon breakout sessions where attendees learned about traffic safety topics that can be implemented regionally.

Crash Data Update
A data driven program, TZD keeps current trends in crash data in the forefront of its efforts. Each workshop provided the latest regional crash data including the preliminary number of fatalities and severely injured for 2013. The data was further broken down by individual counties and by common driving behaviors such as speed, distraction, impairment and seat belt usage. Stakeholders could then use the data to generate ideas for future TZD initiatives.

Beyond the Numbers – Personal Impact Presentations
Ultimately, TZD is about people and how best to keep them safe on our roadways. The personal impact portion of the workshops reminded all attendees that traffic safety is not just about numbers. It has a very human aspect and sadly, can have tragic results. The Jech family spoke at the southeast regional TZD workshop and remembered Marvin Jech who was killed on Highway 14 on his 45th wedding anniversary. The remaining workshops featured Matt Logan, who shared the story of his 17-year-old daughter DJ who died while texting and driving the first day of her senior year. Minnesota State Patrol also showed the Gone Too Soon video, which featured three stories of teens whose lives were forever changed by driving decisions.

Statewide Trauma System Updates & Engineering 101
Chris Ballard, Trauma Systems Coordinator, Minnesota Department of Health, provided information on the statewide trauma system. Since its 2005 implementation, the statewide trauma system has made a positive impact on
MnDOT and county engineers provided an entertaining and enlightening look at recent engineering safety features being installed on Minnesota roadways. Attendees learned about mumbles, rumbles and roundabouts along with many other roadway improvements. While these features can be confusing, the designs make roadways safer and a working knowledge of them has proven helpful to law enforcement in responding to public questions and comments.

**Breakout Sessions**

Afternoon breakout sessions provided attendees with an opportunity to learn more about a particular topic. Sessions included topics on collaborative law enforcement efforts and innovative strategies to address teen driver issues. Attendees could then take ideas discussed in the breakout sessions back to their own communities for implementation.

The east central TZD region took a creative approach to their breakout session by dividing up attendees into their particular traffic “E” and sharing ideas of success stories or challenges in the region. The “Es” then rotated to different stations to learn more about specific challenges from other groups and how best they can work together. At the root of this exercise was generation of new ideas, information sharing, as well as networking opportunities.

**TZD Says Thank you Captain Herrboldt**

**State Patrol Officer Captain Murray Herrboldt retires after 35 years of service**

At the northeast TZD workshop, State Patrol Captain Murray Herrboldt was honored for his 35 years of service and his dedication to the TZD program. “How do you say thank you to someone who has dedicated his life to protecting ours?” said Holly Kostrzewski, northeast region TZD coordinator, during opening remarks for the workshop. “The number of lives he has saved and the people he has helped cannot be measured.”

In addition to his service for the State Patrol, Herrboldt was also a founding co-chair of the northeast TZD regional steering committee and was influential in establishing and promoting the TZD program throughout the region. Herrboldt was honored with a commemorative sign thanking him for his service and support and a special personal thank you by Kostrzewski, “Herrboldt is a legend within the State Patrol and will be missed.”

In addition to Captain Herrboldt, State Patrol Captains Al Kutz, John Ebner and Bruce Hentges also recently retired. We thank everyone for their dedication and service in bringing Minnesota closer to zero deaths.
Orange Cones: No Phones
MnDOT unveils unique work zone safety campaign

Summertime means one thing for Minnesota’s traveling public – construction season! With more than 300 construction projects scheduled for this season alone, it is now more important than ever for motorists to pay close attention and watch out for workers on roads, highways and bridges.

“There’s a lot of roadwork out here because the infrastructure needs work and that means there are a lot of work zones,” says Kevin Gutknecht, MnDOT communications director.

In June, MnDOT, partnering with the TZD program launched its work zone safety campaign “Hang Up! Workers Lives at Stake. Orange Cones: No Phones” to help motorists remember this important message. The campaign will run from more than 40 gas stations. Radio spots will air on Minnesota News Network covering 77 radio stations around the state. Total Traffic Network will also run public service announcements on six Metro radio stations. The campaign is made possible through a grant from the Highway Safety Improvement Program.

A close call on I-694 & Silver Lake Road highlights the importance of paying attention in work zones. It is believed the driver was distracted when this crash occurred. Luckily no one was hurt in this work zone crash.

Cross-Border Saturation Results in Zero Fatalities

Holly Kostrzewski, Northeast/Northwest TZD regional coordinator

Working together is the foundation of the TZD Program. Now that foundation has extended across the state border. In an unprecedented effort, enforcement agencies from both Minnesota and North Dakota worked together to provide extra enforcement during the July 4th holiday weekend along the U.S. Highway 2 corridor, which serves as the gateway between Minnesota’s Lake County and North Dakota’s Grand Forks area.

“These dedicated law enforcement officers will be focusing on the three driving behaviors that cause the majority of the crashes on our regions roadways: speeding, alcohol and drug impairment and distracted driving,” stated Captain Mike Hanson of the Minnesota State Patrol.

“Seat belt and occupant restraint violations will also be right at the top of the enforcement list because this is the one thing that everyone can do to protect themselves and their loved ones in the event that a crash does happen.”

Involved in the cross-border enforcement planning and wave were Minnesota and North Dakota State Patrol, Grand Forks County Sheriff’s Office, Polk County Sheriff’s Office, Crookston Police chief, East Grand Forks Police chief, Grand Forks Police, Altru Hospital, Polk County commissioner, Polk County engineer and the Polk County TZD Safe Roads coalition. Officers from both states were dedicated to making sure that this Independence Day did not become someone’s “Memorial Day.” The enforcement wave resulted in 558 traffic stops, 368 citations, and most importantly ZERO fatalities and serious injury crashes on US Hwy 2 corridor.

Saved by the Ticket

Seat belt citation saves life

Police officers believe their traffic enforcements save lives, but when issuing a traffic citation to an angry motorist, that faith may be hard to find. This is not the case with Cottage Grove Police Officer Nils Torning.

On May 29th, Officer Torning issued a citation to a passenger for not wearing a seatbelt. The passenger was not happy receiving a ticket but obligingly put on his belt. Less than 24 hours later, that same passenger, now driving his own vehicle, was involved in a three-vehicle crash. Miraculously, the driver received only a broken arm and other non-life threatening injuries. He was wearing his seat belt at the time of the accident; most likely because he had received a citation from Officer Torning.

Members from the Office of Traffic Safety, including TZD Law Enforcement Liaison Bill Hammes, made a special visit to the Cottage Grove Police Department to surprise Officer Torning with a special award and thank him for a job well done.

“This is one of those events in which it is clear that the ticket saved a life. Officer Torning’s actions on May 29th resulted in one less fatality here in Minnesota,” said Hammes. “When you look at the damage to the pickup, it is evident the driver most likely would have suffered life ending injuries if not for the belt. This is a great example of how and why traffic enforcement can save lives. Congratulations to Officer Torning and the entire Cottage Grove Police Department for their commitment to traffic safety. You have made a difference!”
Coming in August — The I-90/94 Challenge

Enforcing more than 4,400 miles of roadway across the United States, the I-90/94 Challenge enforcement project will be the largest, single event, data-driven initiative to date on an interstate that runs across the nation. The goal of the Challenge is to have zero fatalities during the enforcement period from August 1-4. Agencies from coast-to-coast will be participating in this event including hundreds of local, county and federal partners. A news conference will kick off the effort on July 30 at the capitol in St. Paul.

Any agency with I-90 or I-94 in their jurisdiction is welcome to participate in the Challenge. Contact the State Patrol district captain in your region for more details. Agencies will also be supporting the effort on adjacent roadways.
